[Salt Sugar Fat](#) Jun 06 2020 From a Pulitzer Prize-winning investigative reporter at The New York Times comes the troubling story of the rise of the processed food industry -- and how it used salt, sugar, and fat to addict us. Salt Sugar Fat is a journey into the highly secretive world of the processed food giants, and the story of how they have deployed these three essential ingredients, over the past five decades, to dominate the North American diet. This is an eye-opening book that demonstrates how the makers of these foods have chosen, time and again, to double down on their efforts to increase consumption and profits, gambling that consumers and regulators would never figure them out. With meticulous original reporting, access to confidential files and memos, and numerous sources from deep inside the industry, it shows how these companies have pushed ahead, despite their own misgivings (never aired publicly). Salt Sugar Fat is the story of how we got here, and it will hold the food giants accountable for the social costs that keep climbing even as some of the industry's own say, "Enough already."

**La gestione del denaro** Jan 26 2022 Il libro descrive gli aspetti tecnici e psicologici che devono essere conosciuti da chi decide di investire il proprio capitale e i propri risparmi sui diversi mercati finanziari. Nella prima parte il volume illustra i concetti di base della finanza comportamentale e delle varie metodologie che si possono utilizzare per costruire un'adeguata Asset Allocation. Si tratta di due aspetti fondamentali che consentono di misurare e gestire in modo adeguato il livello di rischio presente in tutte le forme di investimento. Questa valutazione deve essere infatti effettuata da ogni investitore, dal cassettista al trader intraday, dal neofita all'operatore esperto. L'autore fornisce poi una panoramica completa delle principali strategie operative che si possono utilizzare nella gestione del rischio e delle diverse formule di money management. Ciascun argomento viene trattato sia per un'operatività speculativa di breve termine sia per investimenti che hanno orizzonti temporali di medio-lungo periodo. In particolare sono descritte le varie metodologie di risk management, che riguardano la gestione del rischio presente nelle posizioni assunte sul mercato, e di position sizing, che riguardano invece la determinazione del capitale da utilizzare in ciascuna singola posizione.

*The Albergo Diffuso Model* Aug 09 2020 The hospitality model called "Albergo Diffuso" (AD), or "scattered hotel," has been engineered by Mr Giancarlo Dall'Ara and described by The New York Times as a way of bringing life back to historic towns and rural hamlets by utilizing unused rooms for tourism. This "simple but genial" model devised in Italy in the mid-90's received an award from the UNDP for its sustainability, but despite the spread of AD's, no peer-reviewed books have previously been published in English focusing on this innovation. In this book, the author therefore begins by exploring the AD as a community-based hospitality model, examining both its pros and cons. He then considers conviviality, sense of security, and other factors that Hans Magnus Enzensberger referred to as luxuries of our time for urban dwellers. These represent the key pre-requisites a location must possess to be deemed suitable for this innovation. Next, investors and co-interested private, public and not-for-profit associations are provided with a structured framework to help them achieve a defensible competitive advantage by harnessing the economic potential of valuable, rare, inimitable and non-substitutable (VRIN) resources. The final section assesses the AD as a business model, evaluating various aspects at the heart of any business plan.

**Trading System vincenti** Aug 01 2022 Il libro analizza nel dettaglio numerose strategie operative basate sull'utilizzo dei trading system, strumenti che forniscono segnali automatici di entrata e di uscita sui diversi mercati finanziari, senza quella componente emotiva che condiziona gli investitori che operano con logiche discrezionali. Trading system vincenti esamina in modo approfondito le caratteristiche più importanti - robustezza, significatività, efficienza - che un trading system deve possedere per poter essere considerato valido. In particolare, il volume tratta tutte le variabili che ne condizionano l'andamento - il livello d'entrata, lo stop-loss, il take profit, il trailing stop - fornendo così gli strumenti utili a testare ciascuna strategia operativa su qualunque strumento finanziario (un'azione, un cambio, una materia prima) e avere in tal modo un'immediata conferma della sua efficacia. Il lettore potrà così valutarne la rischiosità e verificare quali sono state le fasi di mercato in cui una strategia ha funzionato meglio. Per ogni sistema presentato viene fornito il codice d'origine (in formato TradeStation, eSignal, Visual Trader), oltre a numerose tabelle

riassuntive, utili nella valutazione della bontà dei risultati ottenuti con l'impiego della singola strategia.

La prima parte del libro illustra i principi cardine che stanno alla base della loro costruzione, evidenziando le varie modalità di utilizzo: le caratteristiche base, la ricerca delle divergenze, la costruzione di trading system e di strumenti di screening automatici, la modifica e la costruzione di nuovi oscillatori. Nella seconda parte si entra invece nel dettaglio di ogni indicatore, che viene descritto partendo dalla logica di base e dalla formula, per poi illustrarne la rappresentazione grafica, il tipico comportamento e le corrette modalità di interpretazione e di utilizzo, analizzandone infine la profittabilità e i risultati statistici.

[L'analisi tecnica e i mercati finanziari](#) Mar 28 2022 Il volume descrive le più importanti metodologie di analisi dei mercati finanziari che vengono spesso sintetizzate con il termine 'analisi tecnica'. Nella parte iniziale sono spiegati i principi fondamentali dalla teoria di Dow: l'analisi dei prezzi, la ricerca del trend, lo studio dei volumi, l'esame dei movimenti di swing. Dopo aver esposto le tecniche di rappresentazione grafica dei prezzi (le bar chart, le candele giapponesi, il Point&figure, il Kagi, l'Heiken Ashi) vengono approfondite le varie figure di inversione e di continuazione (testa e spalle, doppi massimi/doppi minimi, triangoli, flag). La parte quantitativa fornisce poi un'interessante chiave di lettura del comportamento, spesso erratico, dei vari oscillatori tecnici: in particolare viene descritto come operare in presenza di divergenze e ottenere segnali di entrata/uscita dal mercato. La seconda parte dell'opera approfondisce gli indicatori di spessore e di ampiezza del mercato e dei vari strumenti che si possono utilizzare per monitorare il sentiment degli operatori istituzionali (Cot report, Vix, Open interest, margin debt). Alcuni capitoli sono poi dedicati al trading automatico (trading system) e all'analisi intermarket. Quest'ultima, in particolare, illustra i rapporti che legano i diversi mercati finanziari e consente di individuare le situazioni di ottimismo (risk on) e di pessimismo (risk off) che determinano lo spostamento di importanti flussi di denaro tra le varie attività finanziarie. Le cinque appendici spiegano infine le varie tipologie di ordini che si possono inserire nelle piattaforme di trading, il funzionamento dei future (con il relativo effetto leva), il mercato Forex e alcuni oscillatori che, esaminando l'andamento dei volumi, misurano la pressione rialzista/ribassista presente sul mercato. Nell'ultima appendice sono descritti numerosi esempi operativi che mostrano come utilizzare le tecniche spiegate all'interno del libro.

**Integration and Resettlement of Refugees and Forced Migrants** Mar 16 2021 Since 2017, the United States and Europe—among many other refugee-hosting countries—have made significant changes in their refugee policies. New visa restrictions, travel bans, and other regulations were imposed by national governments. At the local level, towns and cities responded in different ways: some resisted national policy by declaring themselves “sanctuary cities”, while others supported exclusionary policies. These different responses influenced refugees’ ability to settle and become integrated. The Refugees in Towns (RIT) project at Tufts University explores local urban integration experiences, drawing on the knowledge and perspectives of refugees and citizens in towns around the world. Since 2017, more than 30 RIT case studies have deepened our local knowledge about the factors that enable or obstruct integration, and the ways in which migrants and hosts co-exist, adapt, and struggle with integration. In this Special Issue, seven articles explore urban integration in towns in Europe (Frankfurt-Rödelheim, Germany; Newcastle, UK; Ambertois,

France; Italy’s cities; and Belgrade, Serbia) and in North America: Bhutanese refugee-hosting US cities, and Antigonish, Canada. The papers explore how refugees and citizens interact; the role of officials and politicians in enabling or obstructing integration; the social, economic, and cultural impact of migration; and the ways—inclusive or exclusive—locals have responded.

**Recording, Documentation, and Information Management for the Conservation of Heritage Places: illustrated examples** May 06 2020 This two volume guide provides a comprehensive overview of the fundamental principles and guidelines for documenting cultural heritage places. It seeks to aid heritage managers and decision makers in understanding their roles and responsibilities in this essential activity. Volume 1 (Guiding Principles) explains why heritage managers must make sure that heritage information fully integrated into all research, investigation and conservation activities. Through the discussion of basic principles, benefits and new approaches, it assists those in charge of preserving immovable cultural heritage by bringing current heritage information practices to a new level. By recording we create a reference for evaluating change and add to the understanding of a site. By documenting we guarantee that information is systematically collected and preserved for future use. By managing the information we make it available and provide a basis for sharing our knowledge and understanding. Volume 2 presents illustrated examples from around the world. Good documentation of a site allows for better understanding of the site's value. Recognizing value and significance is often the first step toward a site's eventual conservation. The information obtained through the documentation process allows conservation professionals to record current conditions, consider appropriate conservation options, plan interventions, apply treatments, and finally, measure the results of their efforts. Documentation can be a tool in resolving a conservation issue. This volume presents several illustration examples from around the world, in various stages of conservation.

**eTrust** Jul 08 2020 There is one thing that moves online consumers to click “add to cart,” that allows sellers to accept certain forms of online payment, and that makes online product reviews meaningful: trust. Without trust, online interactions can’t advance. But how is trust among strangers established on the Internet? What role does reputation play in the formation of online trust? In eTrust, editors Karen Cook, Chris Snijders, Vincent Buskens, and Coye Cheshire explore the unmapped territory where trust, reputation, and online relationships intersect, with major implications for online commerce and social networking. eTrust uses experimental studies and field research to examine how trust in anonymous online exchanges can create or diminish cooperation between people. The first part of the volume looks at how feedback affects online auctions using trust experiments. Gary Bolton and Axel Ockenfels find that the availability of feedback leads to more trust among one-time buyers, while Davide Barrera and Vincent Buskens demonstrate that, in investment transactions, the buyer’s own experience guides decision making about future transactions with sellers. The field studies in Part II of the book examine the degree to which reputation facilitates trust in online exchanges. Andreas Diekmann, Ben Jann, and David Wyder identify a “reputation premium” in mobile phone auctions, which not only drives future transactions between buyers and sellers but also payment modes and starting bids. Chris Snijders and Jeroen Weesie shift focus to the market for online programmers, where tough competition among programmers allows buyers to shop around. The book’s third section reveals how the quality and quantity of available information influences actual marketplace participants. Sonja Utz finds that even when unforeseen accidents hinder transactions—lost packages, computer crashes—the seller is still less likely to overcome repercussions from the negative feedback of dissatisfied buyers. So much of our lives are becoming enmeshed with the

Internet, where ordinary social cues and reputational networks that support trust in the real world simply don't apply. eTrust breaks new ground by articulating the conditions under which trust can evolve and grow online, providing both theoretical and practical insights for anyone interested in how online relationships influence our decisions. **Designing Sustainable Energy for All** Aug 28 2019 This open access book addresses the issue of diffusing sustainable energy access in low- and middle-income contexts. Access to energy is one of the greatest challenges for many people living in low- income and developing contexts, as around 1.4 billion people lack access to electricity. Distributed Renewable Energy systems (DRE) are considered a promising approach to address this challenge and provide energy access to all. However, even if promising, the implementation of DRE systems is not always straightforward. The book analyses, discusses and classifies the promising Sustainable Product-Service System (S.PSS) business models to deliver Distributed Renewable Energy systems in an effective, efficient and sustainable way.
