Rhythmic behaviors and what is involved in producing and responding to rhythms are explored. The organization of horizontal and vertical pitch, tonality, scales, and value judgments, as well as related pedagogical issues are also considered. The basic aspects of musical performance, improvisation, composition, existing musical preferences and tastes, approaches to studying the affective response to music with particular emphasis on developments in psychological aesthetics are examined. The text closely relates the development and prediction of musical ability, music learning as a form of human learning, and music abnormalities, concluding with speculation regarding future research directions. The authors offer their latest review of aspects of human musical behavior with profound recognition of music’s enduring values.
