While low-income students can't find a spot in their local community

colleges for lack of funding, public four-year universities are spending staggering sums on luxurious residence halls, ever-bigger football stadiums, and obscure research institutes. We have cosseted our most advantaged students even as we deny access to the working adults who urgently need higher education to advance their careers and our economy. In *Change.edu: Rebooting for the new talent economy* Andrew S. Rosen clearly and entertainingly details how far the American higher education system has strayed from the goals of access, quality, affordability, and accountability that should characterize our system, and offers a prescription to restore American educational pre-eminence. To change, our system will have to end its reflexive opposition to anything new and different. Rosen describes how each new wave of innovation and expansion of educational access— starting with the founding of Harvard in 1636, and continuing with the advent of land-grant colleges in the 19th century, community colleges in the 20th century and private sector colleges over the last two decades—has been met with misunderstanding and ridicule. When colleges like the University of California, Cornell and Purdue were founded, they were scorned as “pretenders to the title of university” – language that tracks later criticisms of community colleges and most recently for-profit colleges. Avoiding that condescension is just one of the reasons colleges have come under the sway of “Harvard Envy” – schools that were founded to expand access feel an inexorable tug to become more prestigious and exclusive. Even worse, the competition for the best students has led universities to turn themselves into full-fledged resorts; they’ve built climbing walls, French bistros and 20-person hot-tubs to entice students to their campuses. How can America address an incentive system in higher education that is mismatched to the challenges of the years ahead? In *Change.edu*, Rosen outlines “seven certainties” of education in the coming 25 years, and presents an imperative for how our system must prepare for the coming changes. He proposes a new “playbook” for dealing with the change ahead, one that will enable American higher education to regain its global primacy and be a catalyst for economic growth in the 21st century.

The Achievable Dream May 07 2020 *The Achievable Dream: College Board Lessons on Creating Great Schools* is an inspiring look at solutions to the challenges facing education in America, from one of the nation's leading authorities. Based on the personal observations of Gaston Caperton, President of the College Board and former Governor of West Virginia, these stories provide hope for the future and specific lessons of educational success that can be replicated in schools across the country – featuring students, parents, educators, policy-makers and communities that are bucking the trends and demonstrating how America can again be a world leader in education. Using 10-15 real-world case studies that highlight common traits of successful schools – including rigorous coursework taught by dedicated and skilled teachers; parental involvement; high standards that engage and challenge students; and support from local communities, colleges, and businesses – Caperton highlights models of success that reinforce one central theme: Improving education in America requires a shared commitment to learning that must become a national priority.

Midwifery & Childbirth Feb 02 2020 The author, a nurse-midwife and epidemiologist, brings together the myriad strands of history, culture, science, economics, and policy that have resulted in the current condition of maternity care in the US. While acknowledging the role and importance of medical obstetrics, she argues that the most sophisticated medical treatment does not reflect an understanding of childbearing as both a physiologic process and an important human experience and transition. A Practical Guide for Integrating Civic Responsibility Into the Curriculum Oct 12 2020 This curriculum guide is intended to provide practical, easy-to-use applications for the widest range of faculty who would like to develop their students' citizenship skills by integrating civic responsibility concepts and practices into their college courses. The authors recognize that community college faculty teach courses that reflect varying levels of student development, so they have incorporated ideas that can be applied to a large number of courses, from developmental to honors. Similarly, because some faculty may have more flexibility than others in course content or structure, they present activities that can work at several levels of involvement. The authors have also taken into account the various disciplines and certificate and degree programs offered at community colleges, so that faculty members from liberal arts, social sciences, physical sciences, mathematics, and vocational and technical programs all may find this guide useful and appropriate for their classes. This guide contains 5 chapters. Chapter 1 looks at the need for service learning and civic responsibility in the curriculum, as a response to larger changes and trends in society and the mission of higher education. In this chapter the authors also ask teachers to consider their own classroom practices as related to civic responsibility. Chapter 2 examines the meaning and implications of civic responsibility--how it can be defined, how teaching civic skills is highly compatible with the larger mission of higher education, and how civic responsibility is related to service. Chapter 3 focuses on the practice of civic responsibility. Here they explore strategies that classroom teachers can use to integrate civic responsibility concepts and activities into their courses so that students come away with a greater understanding of what is expected of them as citizens in their society. These strategies, all of which can be used with service learning, range from one-time experiences or activities to multi-class or semester-long involvement. Chapter 4 addresses assessment. Although it may prove difficult to assess the level of civic responsibility acquired by students because the goals of a civic curriculum are not as easily quantifiable as many other learning objectives, several strategies are offered that have been used successfully in community colleges. Chapter 5 poses closing questions about the mission of teachers' courses and their college and the challenges they may face as they integrate civic responsibility into their curriculum. Six appendices are included: (1) Films, Quotations, and Articles; (2) Reflection Resources; (3) Reflection Exercises; (4) Bibliography; (5) Organizations and Web Sites; and (6) Supplemental Materials. (Contains 3 tables.) [This document is based upon work supported by the Corporation for National and Community Service.
