Strategic Management Jun 18 2021 Regularly considered to be the cap-stone course on any business or management degree, strategy has developed into a wide-ranging and sometimes overwhelming field of study. However, in recent years the theory of strategy has come under

increasing scrutiny for its perceived failures and detachment from real world practice. With an engaging and conversational tone, this new concise textbook offers an accessible and timely review of the theory and practice of strategic management, explored from a more critical perspective. In a refreshing change from much of the literature, Richard Godfrey takes a wider view of strategy, incorporating insights from the worlds of sociology, psychology and history to highlight the complexity and plurality at the heart of the discipline. The book also incorporates a number of

extensive case studies on contemporary business strategy from the likes of Apple, Nike, Zara and IKEA. Written for both an undergraduate and postgraduate audience, the book challenges a number of underlying assumption and beliefs about strategy and seeks to add clarity and context to the field.

Evidence-based Management of Stroke Sep 21 2021

Winner of a HIGHLY COMMENDED AWARD in the Neurology category of the 2012 BMA Medical Book Competition. More than five million people die from stroke each year. Stroke is also the leading cause of adult disability, affecting over 20 million people worldwide, with two-thirds of stroke victims left permanently disabled. We now know that speed of intervention is critical and patient outcomes are determined by a very narrow therapeutic window, during which physicians need to be able to make their choice of treatment rapidly, based on

the best evidence available. The purpose of this book is to review that evidence, for both medical and surgical therapies as well as preventative strategies, drawing on the expertise of leading international authorities to distinguish the issues for which there is a consensus on best practice from those for which the evidence remains inconclusive. For example, for patients with acute ischemic stroke the first choice is intravenous thrombolytic therapy, but does a treatment window of 0-3 hours deliver outcomes significantly better than one of 3-4.5

hours? Arterial hypertension is the single most important modifiable risk factor for ischemic stroke, but what are the effects of blood pressure reduction among acute stroke patients? How effective is blood pressure lowering in primary intracerebral hemorrhage? What are the arguments in favour of continuation versus temporary discontinuation of antihypertensive therapy immediately after acute ischemic stroke? Endovascular procedures (carotid angioplasty/stenting) are increasingly important but what do the data tell us about their safety? Or durability? How

do they compare with carotid endarterectomy? The management of unruptured intracranial aneurysms is rife with controversies; clip, coil, wait and watch? The authors examine the evidence for and against. Other sections examine the impact of various risk factors, and special populations. A section on stroke after cardiovascular surgeries reviews the incidence and management of stroke following a whole range of procedures. Another examines special risks during pregnancy. Lastly, the book reviews our understanding of childhood stroke and presents current best

practice recommendations for this most challenging group of patients. Reinventing Management Feb 24 2022 The economic crisis was not just caused by a failure of regulation or economic policy; it was a story of the failure of management in a fundamental sense—a deeply flawed approach to management that encouraged bankers to pursue opportunities without regard for their long-term

consequences, and to put their own interests ahead of those of their employers and their shareholders. The revised edition of this best-selling book shows convincingly that many of today's major economic problems in the west can be traced to a failure of management. In this updated edition the author draws our attention to new examples of failed management, from Rupert Murdoch's News Corp, and the disaster at BP, to the ongoing problems in financial services companies such as UBS and RBS. Throughout the book the references and statistics have been updated, to

make this a current, highly relevant analysis of the problems besetting modern business and how managers need to tackle them.

Horse Pasture Management Nov 11 2020 Horse Pasture Management begins with coverage of the structure, function and nutritional value of plants, continuing into identification of pasture plants. Management of soil and plants in a pasture is covered next, followed by horse grazing behavior, feed choices of horses, management of grazing horses, and

how to calculate how many horses should be grazing relative to land size. Management of hay and silage are included, since year-round grazing is not possible on many horse farms. A number of chapters deal with interactions of a horse farm with the environment and other living things. As an aid in good pasture management, one chapter explains construction and use of fencing and watering systems. Contributions are rounded out with a chapter explaining how the University of Kentucky helps horse farm managers develop their pasture management programs. The purpose of the book

The SAGE Handbook of Research Management Nov 23 2021 The Handbook of Research Management is a unique tool for the newly promoted research leader. Larger-scale projects are becoming more common throughout the social sciences and humanities, housed in centres, institutes and programmes. Talented researchers find themselves faced with new challenges to act as managers and leaders rather than as individual scholars. They are responsible for the

careers and professional development of others, and for managing interactions with university administrations and external stakeholders. Although many scientific and technological disciplines have long been organized in this way, few resources have been created to help new leaders understand their roles and responsibilities and to reflect on their practice. This Handbook has been created by the combined experience of a leading social scientist and a chief executive of a major international research development

institution and funder. The editors have recruited a truly global team of contributors to write about the challenges they have encountered in the course of their careers, and to provoke readers to think about how they might respond within their own contexts. This book will be a standard work of reference for new research leaders, in any discipline or country, looking for help and inspiration. The editorial commentaries extend its potential use in support of training events or workshops where groups of new leaders can come together and explore the issues that are confronting

them.
