*The Future of Nursing* Nov 01 2022 The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend

the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Crossing the Quality Chasm Jan 11 2021 Second in a series of publications from the Institute of Medicine's Quality of Health Care in America project Today's health care providers have more research findings and more technology available to them than ever before. Yet recent reports have raised serious doubts about the quality of health care in America. Crossing the Quality Chasm makes an urgent call for fundamental change to close the quality gap. This book recommends a sweeping redesign of the American health care system and provides overarching principles for specific direction for policymakers, health care leaders, clinicians, regulators, purchasers, and others. In this comprehensive volume the committee offers: A set of performance expectations for the 21st century health care system. A set of 10 new rules to guide patient-clinician relationships. A suggested organizing framework to better align the incentives inherent in payment and accountability with improvements in quality. Key steps to promote evidence-based practice and strengthen clinical information systems. Analyzing health care organizations as complex systems, Crossing the Quality Chasm also documents the causes of the quality gap, identifies current practices that impede quality care, and explores how systems approaches can be used to implement change.

*A Uro-Oncology Nurse Specialist's Reflection on her Practice Journey* Oct 27 2019 This book provides a unique insight and background of a uro-oncology nurse's career from a personal and professional perspective, one that encapsulates the ever changing dynamics in the nursing profession over 40 years - 1970's to current, 2022. In writing this book, the objective is to devise a beneficial point of reference, one that is conducive to enlightening individuals within the healthcare profession and the wider context, on the art of reflection and acknowledging its benefits in terms of exploring their feelings and understanding their meaning. Reflection is a highly beneficial tool. In this context, the process enables the author to reflect constructively on her nursing career and practice, to highlight the positive as well as the negative aspects within that practice, and illustrate how the experiences gained have contributed to her development, personally and professionally, throughout that journey. Reflection includes deliberate reflection on experience, emotions, actions and responses and acknowledging how essential these have been to informing the author's existing knowledge base and in ensuring a higher level of learning and understanding. In the continued quest to deliver optimal healthcare, the objective of reflection is in enabling healthcare individuals e.g. nursing students, newly qualified nurses or those considering change of nursing speciality, to better understand their patients from a holistic standpoint (physical, psychological, psycho-social, spiritual, cultural and economic) and ultimately, improving the individual patient's overall experience - cancer or otherwise, as well as improving and enhancing practice outcomes. The importance of reflection and its contribution to increasing the healthcare professional's self-awareness - emotional, personal and professional, is also well underlined. Various Modules and Case Studies within the book are used to explain and highlight key issues, and to enhance content and visual acuity.
