Placing a Value on the Health Benefit for Active-duty Personnel Aug 10 2020 *The availability of health care for active-duty military personnel and their families is a fundamental component of the services' commitment to support their personnel. However, military health care benefits are not routinely counted as an element of military compensation in reports given to individual members, nor in comparisons of military versus civilian compensation. This may be because military health care benefits are provided in such a way that it is difficult to account for the value accruing to individuals. For many military families, health care is received in-kind, that is, the family pays no health insurance premium and pays nothing for the care and prescriptions received at military treatment facilities. However, unlike some other benefits that are received in-kind, such as housing, there is no corresponding allowance for members who "opt out" of the system; indeed, individual military members are not allowed to opt out of the military health care system. In addition, members are selected to enter the military based on their health, and, as it is for other young adults, the demand for health care is considerably less than it is for the elderly. Thus, younger members may not fully appreciate the value of their health care coverage. Despite these factors, the authors argue that the military health care system represents a substantial benefit to military members and families, largely freeing them from concern about receiving health care when the need arises. The purpose of this research is to consider how a reasonable monetary value might be attached to the military health care benefit from the perspective of the active-duty service member and his or her family. Including the value of the health care benefit as an element of military compensation would make military/civilian pay and benefit comparisons more comprehensive and accurate, and bring greater visibility to the value of the health care benefits to members.*

Combining Paid Work and Family Care Feb 13 2021 *As populations age around the world, increasing efforts are required from both families and governments to secure care and support for older and disabled people. At the same time both women and men are expected to increase and lengthen their participation in paid work, which makes combining caring and working a burning issue for social and employment policy and economic sustainability. International discussion about the reconciliation of work and care has previously focused mostly on childcare. Combining paid work and family care widens the debate, bringing into discussion the experiences of those providing support to their partners, older relatives and disabled or seriously ill children. The book analyses the situations of these working carers in Nordic, liberal and East Asian welfare systems. Highlighting what can be learned from individual experiences, the book analyses the changing welfare and labour market policies which shape the lives of working carers in Finland, Sweden, Australia, England, Japan and Taiwan.*

Fragility Fracture Nursing Jan 03 2020 *This open access book aims to provide a comprehensive but practical overview of the knowledge required for the assessment and management of the older adult with or at risk of fragility fracture. It considers this from the perspectives of all of the settings in which this group of patients receive nursing care. Globally, a fragility fracture is estimated to occur every 3 seconds. This amounts to 25 000 fractures per day or 9 million per year. The financial costs are reported to be: 32 billion EUR per year in Europe and 20 billion USD in the United States. As the population of China ages, the cost of hip fracture care there is likely to reach 1.25 billion USD by 2020 and 265 billion by 2050 (International Osteoporosis Foundation 2016). Consequently, the need for nursing for patients with fragility fracture across the world is immense. Fragility fracture is one of the foremost challenges for health care providers, and the impact of each one of those expected 9 million hip fractures is significant pain, disability, reduced quality of life, loss of independence and decreased life expectancy. There is a need for coordinated, multi-disciplinary models of care for secondary fracture prevention based on the increasing evidence that such models make a difference. There is also a need to promote and facilitate high quality, evidence-based effective care to those who suffer a fragility fracture with a focus on the best outcomes for recovery, rehabilitation and secondary prevention of further fracture. The care community has to understand better the experience of fragility fracture from the perspective of the patient so that direct improvements in care can be based on the perspectives of the users. This book supports these needs by providing a comprehensive approach to nursing practice in fragility fracture care.*

Case Management and Care Coordination Mar 05 2020 New collaborative models of health care service delivery are contributing to quality and cost improvements, especially in treating children and families. At the same time, deficits in communication between systems sharing patients can not only lead to confusion and waste, but also to increased risk of harm. Case Management and Care Coordination offers an evidence-based framework, best practices, and clinical common sense to meet this ongoing challenge. Focusing on families of children with chronic health issues, it outlines the processes of case management and care coordination, clarifies the roles and responsibilities of team members, and models streamlined, patient-centered service delivery. This analysis cuts through much of the complexity of case management while emphasizing collaboration, flexibility, and advocacy in pursuing best outcomes for patients. And as an extra dimension of usefulness, the book is accessible to lay readers, empowering families to make informed decisions and have a more active role in their own care. Included in the coverage: Essential skills for integrated case management. Children and youth with special health care needs. Transitional care and case management settings for children and families. Case management and home visitation programs. Managed care and care coordination. Technology and care coordination. Effectively illustrating the possibilities and potential of health care reform, Case Management and Care Coordination is an essential resource for pediatricians and health care professionals, as well as for families of children with special health care needs.

Patient Safety and Quality Mar 29 2022 "Nurses play a vital role in improving the safety and quality of patient care -- not only in the hospital or ambulatory treatment facility, but also of community-based care and the care performed by family members. Nurses need know what proven techniques and interventions they can use to enhance patient outcomes. To address this need, the Agency for Healthcare Research and Quality (AHRQ), with additional funding from the Robert Wood Johnson Foundation, has prepared this comprehensive, 1,400-page, handbook for nurses on patient safety and quality -- Patient Safety and Quality: An Evidence-Based Handbook for Nurses. (AHRQ Publication No. 08-0043)."--Online AHRQ blurb, <http://www.ahrq.gov/qual/nursesdbk>.

Care in Mental Health-Substance Use Nov 12 2020 The Mental Health-Substance Use series provides clear guidance for professionals on this complex and increasingly recognised field. It concentrates on the concerns, dilemmas and concepts that impact on the life and well-being of affected individuals and those close to them, as well as the future direction of practice, education, research, services, intervention, and treatment. This volume is primarily about caring for individuals and families who turn to professionals at a time when their lives are unmanageable alone, but is also concerned with the care that these professions extend to their own members. It contends that these issues are closely interrelated, with appropriate communication and support being key to both. Its chapters draw from a variety of theories and treatments to provide practical advice on the challenge of providing appropriate care tailored to a wide scope of individuals and families. The volumes in this series are designed to challenge concepts and stimulate debate, exploring all aspects of the development in treatment, intervention and care response, and the adoption of research-led best practice. They are essential reading for mental health and substance use professionals, students and educators.

Oxford Textbook of Palliative Care for Children Apr 05 2020 The importance of palliative care for children facing life threatening illness and their families is now widely acknowledged as an essential part of care, which should be available to all children and families, throughout the child's illness and at the end of life. The new edition of the Oxford Textbook of Palliative Care for Children brings together the most up to date information, current knowledge, evidence, and developments of clinical practice in the field. The book is structured into four sections. 'Foundations of Care' describes core issues, the foundations on which paediatric palliative care is based. 'Child and Family Care' looks at different aspects of psychological, social, and cultural care for the sick child or young person, and their family. These chapters cover the time course of the illness, around the time of death and support for the bereaved family. 'Symptom Care' focuses on the uses of medication, specific symptoms, and their management. Finally, 'Delivery of Care' examines practical approaches to care in different environments and the needs of clinicians. Two new editors join the team from Canada and South Africa, reflecting our aims to contribute towards the development of care for children across the world, and to be a resource for both experienced clinicians and those new to the field. Comprehensive in scope, exhaustive in detail, and definitive in authority, this third edition has been thoroughly updated to cover new practices, current epidemiological data, and the evolving models that support the delivery of palliative medicine to children. This includes two new chapters, looking in detail at 'Decision Making' and 'Perinatal Care', and a new section highlighting the emerging importance of 'Palliative Care for Children in Humanitarian Crises'. This book is an essential resource for anyone who works with children worldwide.

Families Caring for an Aging America Jul 01 2022 Family caregiving affects millions of Americans every day, in all walks of life. At least 17.7 million individuals in the United States are caregivers of an older adult with a health or functional limitation. The nation's family caregivers provide the lion's share of long-term care for our older adult population. They are also central to older adults' access to and receipt of health care and community-based social services. Yet the need to recognize and support caregivers is among the least appreciated challenges facing the aging U.S. population. *Families Caring for an Aging America* examines the prevalence and nature of family caregiving of older adults and the available evidence on the effectiveness of programs, supports, and other interventions designed to support family caregivers. This report also assesses and recommends policies to address the needs of family caregivers and to minimize the barriers that they encounter in trying to meet the needs of older adults.
