The Linux Command Line May 07 2020 You've experienced the shiny, point-and-click surface of your Linux computer—now dive below and explore its depths with the power of the command line. The Linux Command Line takes you from your very first terminal keystrokes to writing full programs in Bash, the most popular Linux shell. Along the way you'll learn the timeless skills handed down by generations of gray-bearded, mouse-shunning gurus: file navigation, environment configuration, command chaining, pattern matching with regular expressions, and more. In addition to that practical knowledge, author William Shotts reveals the philosophy behind these tools and the rich heritage that your desktop Linux machine has inherited from Unix supercomputers of yore. As you make your way through the book's short, easily-digestible chapters, you'll learn how to: * Create and delete files, directories, and symlinks * Administer your system, including networking, package installation, and process management * Use standard input and output, redirection, and pipelines * Edit files with Vi, the world's most popular text editor * Write shell scripts to automate common or boring tasks * Slice and dice text files with cut, paste, grep, patch, and sed Once you overcome your initial "shell shock," you'll find that the command line is a natural and expressive way to communicate with your computer. Just don't be surprised if your mouse starts to gather dust. A featured resource in the Linux Foundation's "Evolution of a SysAdmin"

RECRUITMENT AND SELECTION PRACTICES OF IT COMPANIES IN ANDHRA PRADESH – A STUDY OF SELECT UNITS Dec 02 2019

"A highly successful organisation is built on the strengths of exceptional people. No matter how much technology and mechanisation is developed, no organisation could survive and prosper without them". --- Luszez and Kleiner, 2001 The most important corporate resource over the next few years will be talent: smart, sophisticated business people who are technologically literate, globally astute, and operationally agile. And even as the demand for talent goes up, the supply of it will be going down. This seems to particularly hold true in case of the IT-ITES (Information Technology and Information Technology-Enabled Services) industry in India which requires high quality and highly skilled labour force to cater to the rapidly increasing global demand for software services but is currently facing an increasing shortage of skills supply. Moreover, due to shortages of skilled workers, high turnover rates, and rapid business growth in the service sectors, it has been noted that recruiting, selecting, and placing applicants are among the top three priorities of human resource professionals. Since the IT industry in India is faced with these three challenges, recruitment and selection comprises an important human resource practice in this industry. Further, in this industry, human resources comprise both the raw material and the 'technology', and are therefore of prime importance. As India completes the transition from being an agrarian economy to being a full-fledged, first-world economy, operating at the leading edge of contemporary technology, the IT sector is emerging as major driver of the economy. The Indian IT industry comprises of domestic software and services firms as well as foreign firms looking to consolidate their presence in India owing to the increasing cost pressures in US and Europe. This has increased the need to setup in-house development centers or outsource to third-party service providers in low cost countries such as India. IT and IT enabled services include a wide range of services from back-office data entry and processing to customer contact services, corporate support functions, knowledge support functions and research and design activities. As per the latest Forbes Research, India now controls 44 per cent of the global offshore outsourcing market for software and back office services. As per Nasscom estimates, it is projected to grow to 51 per cent. If this growth is sustained, Nasscom has estimated that there will be a potential shortfall of above 2, 10,000 IT and ITES professionals in India by the year 2012 and demand will out-pace the supply. Though the Indian IT industry is in a strong position to leverage this global software opportunity (as India currently has one of the world's largest, most qualified pools of scientific and engineering manpower), this growing global demand is not only for numbers but also for appropriately skilled, industry-oriented professionals as companies are further scaling their operations and offering high value-added services which involve higher levels of technology and more specialized, higher-end services. Hence, firms which want to maintain their competitive advantage have to carefully recruit and select the most suitable out of the large pool of available manpower. Moreover, according to a recent study by McKinsey & Co., although the potential supply of talent in low wage countries such as India is large and growing rapidly, only a fraction of the job candidates could successfully work at a foreign company on account of their limited suitability i.e. though there are many candidates with the technical skills to fill a position, they may not have the cultural skills to "fit in" with the organisation. The same issue is also faced by large globally competitive domestic Indian firms who are competing for the same pool of talent and skills as their foreign counterparts to remain competitive and survive in global and domestic markets.

The Information Ecology of E-government Sep 10 2020 It seems that only a short time ago, numerous academics and practitioners in the field were somewhat blinded by the successes of the dot-com developments in the private sector, and some of them enthusiastically claimed that public administration was to be revolutionized. But that did not happen, and also the dot-com soap bubble burst. This suggests that there is much yet to be learned about innovation in public administration, especially about innovations at the cornerstones of technological and institutional transformations. New and more fully developed formulations of theory into practice are needed. The goal of the editors of this book is to contribute to some aspects of the understanding of e-government. In order to understand electronic government, one has to scrutinize the various environments and contexts in which e-government is developed and implemented. As such, it builds upon the biological and environmental lines of reasoning that have been suggested by authors like Bonnie Nardi and Vicky O'Day, and Thomas Davenport and Laurence Prusak.

The Cathedral & the Bazaar Apr 17 2021 Open source provides the competitive advantage in the Internet Age. According to the August Forrester Report, 56 percent of IT managers interviewed at Global 2,500 companies are already using some type of open source software in their infrastructure and another 6 percent will install it in the next two years. This revolutionary model for collaborative software development is being embraced and studied by many of the biggest players in the high-tech industry, from Sun Microsystems to IBM to Intel. The Cathedral & the Bazaar is a must for anyone who cares about the future of the computer industry or the dynamics of the information economy. Already, billions of dollars have been made and lost based on the ideas in this book. Its conclusions will be studied, debated, and implemented for years to come. According to Bob Young, "This is Eric Raymond's great contribution to the success of the open source revolution, to the adoption of Linux-based operating systems, and to the success of open source users and the companies that supply them." The interest in open source software development has grown enormously in the past year. This revised and expanded paperback edition includes new material on open source developments in 1999 and 2000. Raymond's clear and effective writing style accurately describing the benefits of open source software has been key to its success. With major vendors creating acceptance for open source within companies, independent vendors will become the open source story in 2001.
